

**In Canada, we
have no shortage
of great ideas.**

**Labour market information
at the click of a mouse
for owners and buyers of
construction services**

**CONSTRUCTION
SECTOR COUNCIL**

**CONSEIL SECTORIEL
DE LA CONSTRUCTION**

It's web-based, easy to use, and confidential.

What better way to give and get information on construction projects in your community.

How accurate is the information? How reliable? How up-to-date?

That all depends on you.

You register new projects, with start and end dates and the number of workers. You get labour demand graphs based on the projects in the system. Don't know your labour requirements? Use the system to find out.

The more projects entered, the more accurate the forecasts.

Keep it up to date and it keeps you up to date.

Providing reliable labour market information to the construction industry is part of the Construction Sector Council's mandate. Find out more about us, and about our web-based information tool at www.csc-ca.org.

Just one more great Canadian idea.
